

GAAP TAXONOMY IMPLEMENTATION GUIDE

Version 3.0
March 2023

Financial Instruments—Debt Securities

(2023 GAAP Taxonomy[†])

GAAP Financial Reporting Taxonomy and SEC Reporting Taxonomy (collectively referred to as the “GAAP Taxonomy”) Implementation Guide Series

[†] Changes from the 2021 GAAP Taxonomy Implementation Guide are included in Appendix A.

Financial Accounting Standards Board

The GAAP Taxonomy Implementation Guide is not authoritative; rather, it is a document that communicates how the GAAP Financial Reporting Taxonomy (GRT) and the SEC Reporting Taxonomy (SRT) (collectively referred to as the “GAAP Taxonomy”) are designed. It also provides other information to help a user of the GAAP Taxonomy understand how elements and relationships are structured.

GAAP Taxonomy Implementation Guide on Financial Instruments—Debt Securities

Overview

The purpose of this GAAP Taxonomy Implementation Guide (Guide) is to demonstrate the modeling for the reporting of debt securities under *FASB Accounting Standards Codification*[®] Topic 320. These examples are not intended to encompass all of the potential modeling configurations or to dictate the appearance and structure of an entity’s extension taxonomy or its financial statements. The examples are provided to help users of the GAAP Financial Reporting Taxonomy and the SEC Reporting Taxonomy (collectively referred to as the “GAAP Taxonomy”) understand how the modeling for debt securities is structured within the GAAP Taxonomy. The examples are based on the assumption that an entity meets the criteria for reporting debt securities under Generally Accepted Accounting Principles (GAAP) and/or U.S. Securities and Exchange Commission (SEC) authoritative literature. In addition, the reported line items within the examples do not include all reporting requirements and represent only partial disclosures and statements for illustrative purposes.

While constituents may find the information in the Guide useful, users looking for guidance to conform to SEC eXtensible Business Reporting Language (XBRL) filing requirements should look to the SEC EDGAR Filer Manual and other information provided on the SEC’s website at www.sec.gov/structureddata.

This Guide focuses on detail tagging only (Level 4); it does not include elements for text blocks, policy text blocks, and table text blocks (Levels 1–3).

There are two sections included in this Guide:

- **Section 1: Overview of Modeling:** This section provides an overview of the modeling for the reporting of debt securities.
- **Section 2: Examples of Modeling:** This section includes examples of modeling for the reporting of debt securities.
 - Example 1—[Debt Securities—Fair Value and Amortized Cost Basis](#)
 - Example 2—[Debt Securities—Maturities](#)
 - Example 3—[Debt Securities—Sales](#)
 - Example 4—[Debt Securities—Trading, Still Held](#)

General Information

- (1) A legend for dimensions and domain members has been provided to associate with facts contained in the notes to the financial statements. Extension elements are coded using “Ex.” Legends specific to the examples are provided in Figure x.2 of each example.

Coding	Standard Label	Element Name
A1	Financial Instrument [Axis] Financial Instruments [Domain]	FinancialInstrumentAxis TransfersAndServicingOfFinancialInstrumentsTypesOfFinancialInstrumentsDomain

- (2) Elements that have an instant period type and elements that have a duration period type are indicated as such in Figure x.2 of each example. Instant elements have a single date context (such as December 31, 20XX) and duration elements have a starting and ending date as their context (such as January 1 through December 31, 20XX).
- (3) The XBRL report view (Figure x.3 in each example) does not include all information that may appear in an entity’s instance document. The XBRL report view is provided for illustrative purposes only.
- (4) For elements contained in the GAAP Taxonomy, the standard label is as it appears in the GAAP Taxonomy. For extension elements, the standard label corresponds to the element name. For information about structuring extension elements, see the *SEC EDGAR Filer Manual*.
- (5) Values reported in XBRL are generally entered as positive, with the exception of certain concepts such as net income (loss) or gain (loss).

(6) Preferred labels (Figure x.3 in each example) are the labels created and used by the entity to show the line item captions in its financial statements.

Section 1: Overview of Modeling

In modeling the disclosure requirements within the GAAP Taxonomy, the line-item elements for the debt securities are modeled to include the form of the financial instrument in the line item. For example, “Debt Securities, Available-for-Sale” (L1) and “Debt Securities, Held-to-Maturity, Amortized Cost, before Allowance for Credit Loss” (L10) contain the form of the instrument. The form of the financial instrument is not intended to be conveyed dimensionally. If the form is disaggregated into more specific types, a dimension is used for the disaggregation of the form or an extensible enumeration is used to convey information about non-disaggregating values. Although not included in this Guide, extensible enumerations are illustrated in more detail in the GAAP Taxonomy Implementation Guide, *Extensible Enumerations: A Guide for Preparers*.

Example 1 illustrates the amortized cost to fair value that includes: allowance for credit loss, amortized cost net of the allowance for credit loss, unrealized gain, unrealized loss, and fair value of available-for-sale and held-to-maturity securities. In order for the calculation to work, there are two sets of calculations modeled that have the amortized cost, net of the allowance as the total. The first calculation is the amortized cost, net of allowance as the sum of the amortized cost before the allowance, less the allowance. The second calculation is the amortized cost, net of the allowance as the sum of unrealized gain, unrealized loss, and fair value. The element, “Debt Securities, Available-for-Sale, Amortized Cost, after Allowance for Credit Loss” (L6) is calculated as the total of “Debt Securities, Available-for-Sale, Amortized Cost” (L4) less “Debt Securities, Available-for-Sale, Allowance for Credit Loss” (L5) as shown below:

The element “Debt Securities, Available-for-Sale, Amortized Cost, after Allowance for Credit Loss” (L6) is the sum of “Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Gain, before Tax” (L2), “Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Loss, before Tax” (L3), and “Debt Securities, Available-for-Sale” (L1):

The amortized cost, after the allowance, “Debt Securities, Available-for-Sale, Amortized Cost, after Allowance for Credit Loss” (L6) is modeled as the total even though in the example’s presentation, the fair value “Debt Securities, Available-for-Sale” (L1) is shown as the total. This is because the gross unrealized gain and gross unrealized loss elements, “Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Gain, before Tax” (L2) and “Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Loss, before Tax” (L3) are modeled as a credit and debit, respectively. Gains modeled as credits and losses modeled as debits are consistent with the GAAP Taxonomy design principles to model from the income statement perspective.

XBRL calculations are limited to summations and the balance type of the parent (total) element in the summation determines the calculation weight of the children (summation items). The weight of elements with the same balance type as the parent will have a positive weight and the weight of elements with an opposite balance type to the parent will have a negative weight. The parent element in the calculation is a debit balance type and, therefore, summation items with a debit balance type can only have a positive weight and be additive. Summation items with a credit balance type can only have a negative weight and be subtractive. The gain, modeled as a credit, decreases the debit balance of the fair value, and a loss, modeled as a debit, increases the debit balance of the fair value to arrive at amortized cost in the calculation. However, this would not work if the gain and loss elements were applied to the amortized cost element to arrive at fair value, because a gain should increase the amortized cost and a loss should decrease the amortized cost to sum to fair value, but the calculation constraints do not allow a credit balance type to be added to a debit balance type element and for a debit balance type to be subtracted from a debit balance type element. The allowance is modeled as a credit and decreases the amortized cost balance in the calculation to fair value. It cannot be in the same calculation as the gain, loss and fair value elements to sum to amortized cost because it is not subtracted from fair value. The allowance subtracts from amortized cost and the second calculation of “Debt Securities, Available-for-Sale, Amortized Cost, after Allowance for Credit Loss”(L6) that includes “Debt Securities, Available-for-Sale, Amortized Cost” (L4) less “Debt Securities, Available-for-Sale, Allowance for Credit Loss” (L5) is needed because the allowance otherwise would decrease the fair value.

The same structure is applied to held-to-maturity securities:

- [-] [+] Debt Securities, Held-to-Maturity, Amortized Cost, after Allowance for Credit Loss
 - [+] Debt Securities, Held-to-Maturity, Allowance for Credit Loss
 - [+] Debt Securities, Held-to-Maturity, Amortized Cost, before Allowance for Credit Loss

- [-] [+] Debt Securities, Held-to-Maturity, Amortized Cost, after Allowance for Credit Loss
 - [+] Debt Securities, Held-to-Maturity, Accumulated Unrecognized Loss
 - [+] Debt Securities, Held-to-Maturity, Accumulated Unrecognized Gain
 - [+] Debt Securities, Held-to-Maturity, Fair Value

Section 2: Examples of Modeling

Example 1—Debt Securities—Fair Value and Amortized Cost Basis

This example illustrates the modeling for disclosures about fair value, amortized cost, allowance and gross unrecognized holding gains and losses.

(in thousands)	Amortized cost, before allowance	Allowance	Amortized cost, after allowance	Gross unrealized gains	Gross unrealized losses	Fair value
Available-for-sale debt securities						
Mortgage-backed securities:

Figure 1.3 (continued)

Notes:

- “Debt Securities, Available-for-Sale” (**L1**) represents the fair value of available-for-sale debt securities, and is the amount presented on the statement of financial position. The accumulated gross unrealized gain and loss are represented by the elements “Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Gain, before Tax” (**L2**) and “Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Loss, before Tax” (**L3**). The gain, “Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Gain, before Tax” (**L2**) is modeled as a credit and the loss, “Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Loss, before Tax” (**L3**) is modeled as a debit. The allowance, “Debt Securities, Available-for-Sale, Allowance for Credit Loss” (**L5**), is modeled as a credit. As discussed in the [Modeling Section](#) of this Guide, to make the schedule of amortized cost to fair value calculation work, the amortized cost, *after* the allowance, “Debt Securities, Available-for-Sale, Amortized Cost, after Allowance for Credit Loss” (**L6**) needs to be the total of the fair value (**L1**), gain (**L2**) and loss (**L3**) in the calculation. In addition, there is a second calculation modeled with “Debt Securities, Available-for-Sale, Amortized Cost, after Allowance for Credit Loss” (**L6**) as the total of amortized cost, “Debt Securities, Available-for-Sale, Amortized Cost” (**L4**) less the allowance, “Debt Securities, Available-for-Sale, Allowance for Credit Loss” (**L5**). The net amortized cost subtotal, “Debt Securities, Available-for-Sale, Amortized Cost, after Allowance for Credit Loss” (**L6**) is needed for a complete calculation. The amortized cost and the allowance without a subtotal does not work in a calculation because of the balance attribute of the allowance and gain elements discussed above. Below are the calculations illustrating those relationships:

+ Debt Securities, Available-for-Sale, Amortized Cost	Dr	246,279,000
- Debt Securities, Available-for-Sale, Allowance for Credit Loss	Cr	9,849,000
Debt Securities, Available-for-Sale, Amortized Cost, after Allowance for Credit Loss	Dr	236,430,000
✓ Consistent with value of \$236,430,000		

+ Debt Securities, Available-for-Sale	Dr	238,891,000
- Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Gain, before Tax	Cr	4,108,000
+ Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Loss, before Tax	Dr	1,647,000
Debt Securities, Available-for-Sale, Amortized Cost, after Allowance for Credit Loss	Dr	236,430,000
✓ Consistent with value of \$236,430,000		

- If the fair value element, a debit, “Debt Securities, Available-for-Sale” (**L1**), is used as the calculation total, the gain element, “Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Gain, before Tax” (**L2**)—a credit—will decrease the fair value and the loss element, “Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Loss, before Tax” (**L3**)—a debit—will increase the fair value, when they should have the opposite effect. In addition, the allowance element, “Debt Securities, Available-for-Sale, Allowance for Credit Loss” (**L5**)—a credit—will decrease the fair value. The result is an incorrect fair value total:

+ Debt Securities, Available-for-Sale, Amortized Cost	Dr	246,279,000
- Available-for-sale debt securities, Allowance	Cr	9,849,000
- Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Gain, before Tax	Cr	4,108,000
+ Debt Securities, Available-for-Sale, Accumulated Gross Unrealized Loss, before Tax	Dr	1,647,000
Debt Securities, Available-for-Sale	Dr	233,969,000
☒ Inconsistent with value of \$238,891,000		

- The same construct for available-for-sale securities is also needed for held-to-maturity securities with two calculations: 1) The amortized cost after the allowance element, “Debt Securities, Held-to-Maturity, Amortized Cost, after Allowance for Credit Loss” (**L12**), is the total of “Debt Securities, Held-to-Maturity, Amortized Cost, before Allowance for Credit Loss” (**L10**) and “Debt Securities, Held-to-Maturity, Allowance for Credit Loss” (**L11**), and 2) the fair value element, “Debt Securities, Held-to-Maturity, Fair Value” (**L7**), is decreased by “Debt Securities, Held-to-Maturity, Accumulated Unrecognized Gain” (**L8**), and increased by “Debt Securities, Held-to-Maturity, Accumulated Unrecognized Loss” (**L9**). The ending balance is the amortized cost after the allowance, “Debt Securities, Held-to-Maturity, Amortized Cost, after Allowance for Credit Loss” (**L12**). Both calculations are shown below:

+ Debt Securities, Held-to-Maturity, Amortized Cost, before Allowance for Credit Loss	Dr	52,257,000
- Debt Securities, Held-to-Maturity, Allowance for Credit Loss	Cr	2,089,000
Debt Securities, Held-to-Maturity, Amortized Cost, after Allowance for Credit Loss	Dr	50,168,000
✓ Consistent with value of \$50,168,000		

+ Debt Securities, Held-to-Maturity, Fair Value	Dr	50,889,000
- Debt Securities, Held-to-Maturity, Accumulated Unrecognized Gain	Cr	1,012,000
+ Debt Securities, Held-to-Maturity, Accumulated Unrecognized Loss	Dr	291,000
Debt Securities, Held-to-Maturity, Amortized Cost, after Allowance for Credit Loss	Dr	50,168,000
✓ Consistent with value of \$50,168,000		

- Similar to available-for-sale securities, if the fair value element, “Debt Securities, Held-to-Maturity, Fair Value” (L7), is the calculation total of “Debt Securities, Held-to-Maturity, Amortized Cost, before Allowance for Credit Loss” (L10), “Debt Securities, Held-to-Maturity, Allowance for Credit Loss”(L11), “Debt Securities, Held-to-Maturity, Accumulated Unrecognized Gain” (L8), and “Debt Securities, Held-to-Maturity, Accumulated Unrecognized Loss” (L9), the total is inconsistent:

+ Debt Securities, Held-to-Maturity, Amortized Cost, before Allowance for Credit Loss	Dr	52,257,000
- Debt Securities, Held-to-Maturity, Allowance for Credit Loss	Cr	2,089,000
- Debt Securities, Held-to-Maturity, Accumulated Unrecognized Gain	Cr	1,012,000
+ Debt Securities, Held-to-Maturity, Accumulated Unrecognized Loss	Dr	291,000
Debt Securities, Held-to-Maturity, Fair Value	Dr	49,447,000
☒ Inconsistent with value of \$50,889,000		

Example 2—Debt Securities—Maturities

This example illustrates the modeling for disclosures of the fair value and amortized cost of investment securities by contractual maturity on a fiscal year basis.

Fair value by remaining maturity (in thousands)	Due in one year or less	Due after one year through five years	Due after 5 years through 10 years	Due after 10 years	Total
Available-for-sale debt securities					
Mortgage-backed securities	L19, A1:M1 \$ 2,022	L20, A1:M1 \$ 2,449	L21, A1:M1 \$ 7,756	L22, A1:M1 \$ 75,325	L1, A1:M1 \$ 87,552

Figure 2.3 (continued)

Notes:

- The following elements were used to tag the fact value for held-to-maturity securities originated each year, along with the alternative elements that may be used if accrued interest is excluded:
 - “Debt Securities, Held-to-Maturity, Amortized Cost, after Allowance for Credit Loss” (L12) or “Debt Securities, Held-to-Maturity, Excluding Accrued Interest, after Allowance for Credit Loss.”
 - “Debt Securities, Held-to-Maturity, Amortized Cost, after Allowance for Credit Loss, Maturity, Allocated and Single Maturity Date, Year One” (L31) or “Debt Securities, Held-to-Maturity, Amortized Cost Excluding Accrued Interest, after Allowance for Credit Loss, Maturity, Allocated and Single Maturity Date, Year One.”
 - “Debt Securities, Held-to-Maturity, Amortized Cost, after Allowance for Credit Loss, Maturity, Allocated and Single Maturity Date, after Year One through Five” (L32) or “Debt Securities, Held-to-Maturity, Amortized Cost Excluding Accrued Interest, after Allowance for Credit Loss, Maturity, Allocated and Single Maturity Date, after Year One through Five.”
 - “Debt Securities, Held-to-Maturity, Amortized Cost, after Allowance for Credit Loss, Maturity, Allocated and Single Maturity Date, after Year Five through Ten” (L33) or “Debt Securities, Held-to-Maturity, Amortized Cost Excluding Accrued Interest, after Allowance for Credit Loss, Maturity, Allocated and Single Maturity Date, after Year 5 through 10.”
 - “Debt Securities, Held-to-Maturity, Amortized Cost, after Allowance for Credit Loss, Maturity, Allocated and Single Maturity Date, after Year 10” (L34) or “Debt Securities, Held-to-Maturity, Amortized Cost Excluding Accrued Interest, after Allowance for Credit Loss, Maturity, Allocated and Single Maturity Date, after Year 10.”

Example 3—Debt Securities—Sales

This example illustrates the modeling for disclosure of sales of available-for-sale debt securities.

Gross realized gains(losses) on sales of available-for-sale securities included in earnings		
(in thousands)		
Gross realized gains	L36 \$	133
Gross realized (losses)	L37	(21)
Total realized gains (losses)	L38 \$	<u>112</u>

The amount of proceeds from the sale of available-for-sale securities was \$1.25 million¹.

Figure 3.1

Legend†:

¹**L35**

† This legend, which is not part of the disclosure, is provided to illustrate the elements associated with values reported.

The legend for the elements used to tag these facts follows:

	Standard Label	Balance Type	Period Type	Element Name
L35	Proceeds from Sale of Debt Securities, Available-for-Sale	Debit	Duration	ProceedsFromSaleOfAvailableForSaleSecuritiesDebt
L36	Debt Securities, Available-for-Sale, Realized Gain	Credit	Duration	DebtSecuritiesAvailableForSaleRealizedGain
L37	Debt Securities, Available-for-Sale, Realized Loss	Debit	Duration	DebtSecuritiesAvailableForSaleRealizedLoss
L38	Debt Securities, Available-for-Sale, Realized Gain (Loss)	Credit	Duration	DebtSecuritiesAvailableForSaleRealizedGainLoss

Figure 3.2

The XBRL report view created using the modeling structure is provided here:

	Standard Label	Preferred Label	
L35	Proceeds from Sale of Debt Securities, Available-for-Sale	Proceeds from the sale of available-for-sale securities	1250000
L36	Debt Securities, Available-for-Sale, Realized Gain	Gross realized gains	133000
L37	Debt Securities, Available-for-Sale, Realized Loss	Gross realized (losses)	21000
L38	Debt Securities, Available-for-Sale, Realized Gain (Loss)	Total realized gains (losses)	112000

Figure 3.3

Example 4—Debt Securities—Trading, Still Held

This example illustrates the modeling for disclosure of the portion of trading gains and losses for the period that relates to trading securities still held.

(in thousands)			
Net gains and losses recognized for trading securities	L41	\$	105,000
Less: Net gains and losses recognized on trading securities sold	L40		(80,000)
Unrealized gains and losses recognized on trading securities still held	L39	\$	<u>25,000</u>

Figure 4.1

The legend for the elements used to tag these facts follows:

	Standard Label	Balance Type	Period Type	Element Name
L39	Debt Securities, Trading, Unrealized Gain (Loss)	Credit	Duration	DebtSecuritiesTradingUnrealizedGainLoss
L40	Debt Securities, Trading, Realized Gain (Loss)	Credit	Duration	DebtSecuritiesTradingRealizedGainLoss
L41	Debt Securities, Trading, Gain (Loss)	Credit	Duration	DebtSecuritiesTradingGainLoss

Figure 4.2

The XBRL report view created using the modeling structure is provided here:

	Standard Label	Preferred Label	
L39	Debt Securities, Trading, Unrealized Gain (Loss)	Unrealized gains and losses recognized on trading securities still held	25000000
L40	Debt Securities, Trading, Realized Gain (Loss)	Net gains and losses recognized on trading securities sold	80000000
L41	Debt Securities, Trading, Gain (Loss)	Net gains and losses recognized for trading securities	105000000

Figure 4.3

Note:

- “Debt Securities, Trading, Unrealized Gain (Loss)” (**L39**) represents the net unrealized gain on trading securities held at the end of the period. The presentation shows the net gain recognized on trading securities using, “Debt Securities, Trading, Gain (Loss)” (**L41**) less the net realized gain on securities sold using “Debt Securities, Trading, Realized Gain (Loss)” (**L40**). However, the calculation is structured as **L39** + **L40** = **L41** because the elements have credit balance attributes and represent gains. The calculation would not work if it followed the presentation construct because in the presentation, **L40** is deducted from **L41**, but in an XBRL calculation, **L40** represents a credit gain and is added to **L39**, also a credit gain, for a total gain of **L41**.

Appendix A—Changes to 2023 GAAP Taxonomy Implementation Guide (Version 3.0) from 2021 GAAP Taxonomy Implementation Guide (Version 2.0)
